THE

It's the movie he doesn't want you to see

EEK! These startling pictures of Brad Pitt will make your skin crawl!

The Hollywood heartthrob hoped his female fans would never see these creepy photos from his first movie, The Dark Side of the Sun.

Brad, then just 24, plays Rick, a man forced to wear a bizarre full-body leather outfit because the slightest exposure to the sun will destroy his skin and kill him.

But GLOBE has exposed the handsome star's schlocky secret to the light of day – and boy is his face red. "Brad is horrified these pictures have surfaced after so long," reveals a source close to the actor. "He considers himself a serious actor and this picture is a mockery of his ability."

Brad, who will be 32 next month, told a friend: "Everyone started somewhere, but this picture, which was never released, disappeared long ago. I'm furious it's turned up."

He had every right to believe the movie shot in Yugoslavia in 1988 had been destroyed, because civil war broke out before filming was complete and the footage was thought to be lost.

"It's one Brad would just as soon forget," says an insider. "It's a far cry from his prestigious hits like Legends of the Fall and Seven. The movie is corny and ridiculous, everything Brad knows he's not today."

In the film, he travels to the Adriatic Sea in a desperate bid to find a cure for his deadly skin disease – but he falls in love with a gorgeous woman played by future Melrose Place star Sheryl Pollak.

The lure of true love and a normal life proves too strong for Rick, and he unmasks himself so he can make love to Sheryl's character on the beach in broad daylight. Sadly, he dies from the ravages of the sun.

Rumors flew of a real-life romance between the sexy young stars, but Brad's current galpal Gwyneth Paltrow, 24, will be glad to hear they aren't true, says producer Angelo Arandjelovic, who plans to release the movie – despite Brad's objections.

"Brad's star shines very bright today," says Arandjelovic. "There's no better time to show the world his first movie."

Ashley slims down for Broadway

Lovely Liz slimmed down with a walking program and a special 6-day-on 1-day-off diet

Evening Shade star drops 30 lbs

EVENING SHADE actress Elizabeth Ashley's trimming transformation from 150 pounds to a red-hot 120 has Broadway theatergoers applauding her new bod.

"Elizabeth looks super on stage," says a pal, who's seen her in Tennessee Williams' play The Red Devil Battery Sign.

"Gone are the jowls and puffy cheeks from her days on TV. She's lovelier than ever!"

Losing the 30 pounds was easy.

Instead of denying herself, the 57-year-old actress who played Marilu Henner's Aunt Freida in Evening Shade, simply watched her calories and fat for six days in a row and then rewarded herself with a hamburger and fries on the seventh day.

"Elizabeth was very sensible about her weight-loss program," adds the pal.

"She cut down gradually and didn't starve herself."

The 5-foot-5 beauty also took daily brisk walks through Central Park, a friend

"By the time she around the reserv turned home, a couple of hind her."

Liz, wh in Willia Cat on Roof in t hadn't Broadwa But her look gave her the courage to tread the boards again.

Liz, Burt and the Evening Shade gang

"She's back because she knows she looks hot," confides the pal.

There's only one drawback to her svelte new shape, Liz told her friend – she hates watching old tapes of her and Evening Shade co-star Burt Reynolds.

"She said: 'I look so fat. It makes me want to call everyone on the show and tell them I'm not big anymore.'"
